

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

SCIENTIFIC JOURNALS AND ARTICLES

The American Journal of Science, for August, contains the following articles:

E. T. ALLEN and J. K. CLEMENT: "Rôle of Water in Tremolite and Other Minerals."

G. C. ASHMAN: "Quantitative Determination of the Radium Emanation in the Atmosphere."

R. W. LANGLEY: "Determination of Small Amounts of Barium in Rocks."

W. G. MIXTER: "Heat of Combination of Acidic Oxides with Sodium Oxide and Heat of Oxidation of Chromium."

I. K. PHELPS and L. H. WEED: "Concerning Certain Organic Acids and Acid Anhydrides as Standards in Alkalimetry and Acidimetry."

I. K. PHELPS and L. H. WEED: "Comparison between Succinic Acid, Arsenious Oxide and Silver Chloride as Standards in Iodimetry, Acidimetry and Alkalimetry."

W. E. FORD and E. W. TILLOTSON, JR.: "Orthoclase Twins of Unusual Habit."

J. V. LEWIS: "Palisade Diabase of New Jersey."

F. B. LOOMIS: "New Horse from the Lower Miocene."

THE contents of *The Auk*, for July, are as follows:

E. S. CAMERON: "Observations on the Golden Eagle in Montana."

J. H. RILEY: "Notes on the Broad-winged Hawks of the West Indies, with Description of a New Form."

RICHARD C. HARLOW: "Recent Notes on Birds of Eastern Pennsylvania."

C. J. PENNOCK: "Birds of Delaware—Additional Notes."

J. A. ALLEN: "The Case of *STRIX* vs. *ALUCO*."

EDWARD J. COURT: "Treganza Blue Heron."

FRANCIS H. ALLEN: "Larus kumlieni and other Northern Gulls in the Neighborhood of Boston."

J. A. ALLEN: "*Columbina* versus *Chæmepelia*."

JAMES H. FLEMING: "The Destruction of Whistling Swans (*Olor columbianus*) at Niagara Falls."

AUSTIN HOBART CLARK: "The Macaw of Dominica."

TYPES OF AMERICAN GRASSES

UNDER this title, Mr. A. S. Hitchcock has recently published in "Contributions from the U. S. National Herbarium," Vol. 12, Pt. 3, the results of his studies of the types of

American grasses described by Linnæus, Gronovius, Sloane, Swartz and Michaux. These studies were made by Mr. Hitchcock in the spring of 1907, at which time he made a detailed examination of American grasses preserved in the larger herbaria of Europe.

The contribution is a noteworthy one and will go far toward fixing names for the American grasses discussed, not alone specifically, but probably in some cases generically as well. The preservation of grass specimens is in most cases satisfactory as they are little subject to insect depredation. In a large majority of instances, Mr. Hitchcock found the type specimen readily and certainly identifiable; in some instances where the author had confused two or more species under one, he was obliged to consider each case upon its merits, and he has presented the evidence on which the type specimen was selected by him. In a few of these cases there is opportunity for difference of opinion, but it seems to the writer that Mr. Hitchcock's decision in such cases should be accepted without further question in all instances in which he has first designated the type.

There are a few species which require transposition of names, as for example, *Cenchrus tribuloides* L., the type of which proves to be the same as *C. macrocephalus* (Doell) Scribn.; the plant which has mostly been known under the name *tribuloides* should bear the name *C. carolinianus* Walter; the study brings out a number of cases in which priority requires the acceptance of earlier published names than those in current use.

It has been perhaps widely assumed that most of the species of the older authors were more comprehensive in including slightly different races than those of recent writers. In some instances this is doubtless true, but in many others the species conception was apparently broad only because the describer had but a single specimen, or at best but few to base an opinion upon. Linnæus proposed some species on specimens which have been regarded by some modern authors as belonging to the same species, the differences being so slight, while on the other hand he some-
